Upon completion of the B.S.Ed. degree in Biology Education, students will:

- have a basic knowledge of the principles of biology.
- be able to apply their knowledge of biological principles and the scientific method of inquiry to solve new problems.
- have a high degree of proficiency in the use of computer technology.
- be able to communicate their knowledge and results effectively.
- create a safe and respectful learning environment with an awareness of developmental levels and needs of learners.
- demonstrate professional dispositions of effective teachers to positively impact student learning while contributing to the well-being of their district.
